Certificate

for saved greenhouse gas emissions and climate protection

Keith Taylor

***saves with atmosfair 11100 kg CO₂-äq.
greenhouse gas emissions***

This corresponds to about 100 % of the warming effect of pollutants caused by one passenger on 5 flights on the routes BRU -> GVA, LHR -> CAI, CAI -> BRU, BRU -> NRT, BRU -> LIS on a total distance of 35155 kilometers.

atmosfair calculates the fuel consumption per passenger and takes into consideration the probable or entered aircraft type, the number of seats and the seat occupancy rate, and the ratio of take-off, cruising, and landing. Furthermore, for all emissions produced at high cruising altitudes (more than 9 kilometres above sea level) a high altitude surcharge* is used.

* taking into account the increased impact of emissions in critical flight altitudes (radiative forcing index 2.7)

Your contribution

of 260,00 Euro goes to emission saving projects chosen by atmosfair. These are subject to the rules and procedures set out in the Clean Development Mechanism (CDM) of the Kyoto protocol and the "Gold Standard" established by the international environmental NGO community and are controlled by UN-accredited organisations. The current project-portfolio can be viewed at www.atmosfair.com.

Our guarantee

atmosfair guarantees that the saved emissions will be certified by the responsible authorities and that corresponding certificates will be permanently stored in the cancellation account at the registry of the German Federal Environmental Agency (Umweltbundesamt). This is the formal proof that the emissions are permanently saved, that they can no longer be released in the atmosphere and that no other person can get hold of these emission savings.

Your individual transaction number: 28MAR12WVK234741
